toast 'n' roast (2006)

28-gauge nichrome

sized to fit a small pair of adult hands

nichrome is a common heating element residing within our domestic realm: hair-dryers render flat mops into fancy 'dos, toasters transform soft white into crusty magnificence. recently, a new revolution in textile engineering has found a way to harness this warming capability to where we need it most: on our own cold bodies. fashion has never been so modern and so warm!

in all seriousness, please do not touch.
